

IPO Details Released By Blanco Minerals Inc.

November 4, 2019: Vancouver, B.C.: Blanco Minerals Inc. are pleased to announce that the final preparations are in place in order for the company to proceed with its IPO listing on the New York Stock Exchange.

This announcement is made to confirm that on Friday, November 1, 2019, the IPO underwriters, Barclays Securities and Credit Suisse USA, have submitted all of the final IPO documentations with the SEC market regulators in order to receive confirmation to list on the main board of the New York Stock Exchange. The date of Wednesday, January 22, 2020 has been applied for as a listing date. The company and its IPO underwriters seek final approval for the listing date from the regulators and foresee the date will be given such approval by no later than mid December 2019.

The full prospectus for the IPO listing will be made available to the general public immediately after the regulators give final approval to the filed documentation and the application of the listing date. Since it is expected that such approvals will be granted by no later than mid December 2019, the public release of the IPO prospectus should occur by the end of December 2019.

It has been stated by the IPO underwriting managers that are leading the filing process that the pricing of the IPO, which will occur 3-5 business days before the listing, will be at minimally USD \$6.00 per share. Due to an extremely strong marketplace in all aspects of lithium industry investment, it is widely agreed that, after the listing, the Blanco Minerals' share price will continually grow at a steady pace over the short and long term.

Peter Ross, Blanco Minerals' CEO said today, " The whole team including the board members, directors, our private equity partners and our pre-IPO investors are delighted that the underwriters have filed the IPO documentation in a timely and efficient manner. It was decided to set the actual listing date in the second half of January in order for the regulators to have plenty of time to approve the date in the case of any requirements for further documentation needing to be filed."

Mr. Ross also said, "Since it is still quite early days in the global lithium boom, our timing for going public could not be better. In Barclays Securities and Credit Suisse we have the greatest promoters and underwriters backing us. The lithium battery industry will continue to grow at a massive rate for the next several years. The electric car industry is still in its infancy. We thank all of the investors who have put their faith in our organization. We are all about to be rewarded tremendously for that belief in the future of Blanco Minerals."
